FOR CATS & DOGS

RELIEF FOR CATS & DOGS is a dry powder of a special proprietary blend of Zingiberaceae spices (gingers), recognized for millenia as powerful aids to digestion.

The processing of these ginger spices has been designed to maintain the integrity of their numerous essential oils and powerful antioxidants, and their unique proteins and starches. The dry rhizomes have been supplemented with the oils of culinary ginger that are widely used for their special properties, and encapsulated in rice flour.

FOOD INTOLERANCE AND ALLERGY

Pet food contains components such as wheat flour, milk, and soy that may cause serious health problems for cats and dogs. These feed components contain proteins with structural elements that prevent the animal's digestive system from metabolizing the proteins efficiently. These structural elements contain amino acid sequences that are capable of oversensitizing the animal's immune system if the animal has a gene that recognizes these amino acid sequences. Pets' digestive systems were not designed for some of these foods.

Once sensitized, the animal's immune system will respond to the food and the pet may suffer a broad range of conditions including autoimmune diseases, all of which should be considered as serious and actions should be promptly taken if adverse reactions to food are observed, including consulting a veterinary practitioner.

HOW MAY RELIEF FOR CATS & DOGS ASSIST?

The components of RELIEF FOR CATS & DOGS are designed by nature to aid in the digestion of the protein structural elements that cause food intolerance and allergy. Routinely adding RELIEF FOR CATS & DOGS to your pet's feed has the potential to reduce the risk of the adverse reactions.

HOW DO I USE RELIEF FOR CATS & DOGS?

Sprinkle about ¼ teaspoon (0.5g) for each 6Kg body weight onto the feed or mix the measured powder with a small amount of water before sprinkling it onto the feed.
