

spice 'n rice

NATURAL DIGESTION AID

SPICE 'N RICE is a dry powder of a special proprietary blend of Zingiberaceae spices (gingers), designed to aid digestion in large animals such as horses.

The processing of these ginger spices has been designed to maintain the integrity of their numerous essential oils and powerful anti-oxidants, and their unique proteins and starches. The dry rhizomes have been supplemented with the oils of culinary ginger that are widely used for their special properties.

FOOD INTOLERANCE AND ALLERGY

Feeds for large animals usually contain components such as milled cereal grains that may cause serious health problems for the animals. These feed components contain proteins with structural elements that prevent the animal's digestive system from metabolizing the proteins efficiently. These proteins have been designed by nature to protect the grains' starch for the grains' germination, and consequently the feed's proteins and starches are not efficiently digested early in the animals' gastrointestinal tract. They move through into the hind-gut where their fermentation causes a lowering of the pH of the hind gut that in turn facilitates a change in the microflora culture of the hind gut to bacteria that express harmful toxins and unhelpful fatty acids. These protein structural elements contain amino acid sequences that are capable of over-sensitizing the animal's immune system if the animal has a gene that recognizes these amino acid sequences.

Once sensitized, the animal's immune system will respond to the food and the animal may suffer a broad range of conditions including auto-immune diseases, all of which should be considered as serious and actions should be promptly taken if adverse reactions to feed are observed, including consulting a veterinary practitioner.

HOW MAY SPICE 'N RICE ASSIST?

The components of SPICE 'N RICE are designed by nature to aid in the specific digestion of the protein structural elements that cause food intolerance and allergy. Routinely adding SPICE 'N RICE to your animals' feed has the potential to reduce the risk of the adverse reactions.

HOW DO I USE SPICE 'N RICE?

Sprinkle 1 teaspoon (2g) for each 45Kg body weight onto the feed twice a day or mix one scoop of the powder (20g) into each feed twice a day for a 450 Kg animal.
